I have spent the better part of the last 53 years

taking well over a thousand multiple choice tests. As a teenager, I struggled through high school. Armed with an average IQ and some fairly significant learning disabilities, I barely graduating with a 1.4 grade point average. However, I was smart enough to figure out early on that much of academics, and that achieving success in academics, had far more to do with the ability to master multiple choice tests than raw intellect. From there I began a 35

year study on the art and science of passing, mastering and scoring high on multiple choice tests. Despite a very substandard high school GPA, I scored high enough on the SAT and the ACT to be accepted to the University of Michigan, one of the top academic institutions in the Country. Upon graduation from college, I accepted a commission as an officer in the United States Marine Corps. As a Marine Officer, I completed dozens of military and civilian schools, including

a Masters Degree from Boston University, and a Juris Doctor Degree from the University of Detroit School of Law. In fact, I earned a full ride military scholarship to law school based primarily on the fact I scored so highly on the Law School Aptitude Test (98th percentile). Upon completion of law school, I passed the Michigan Bar exam on the first attempt, scoring 149 points on the multistate (the multiple choice portion of the exam), which was one question away from automatic

passage (at 150 they examiners do not need to grade the essay portion). I have also taken and applied many of the Marine Corps concepts of discipline and mental toughness to the art of preparing for, taking, and passing multiple choice tests. Resigning my commission and leaving the Marine Corps in 1990, I continued both my education as well as honing my test taking skills. I currently hold 12 professional licenses and 5 professional designations, which

required me to pass several comprehensive and difficult multiple choice examinations. I have also attended dozens of professional test preparation courses. From those courses I have "cherry picked" all of the valuable lessons and test taking tips and have included those in this book. One of the professional licenses I hold is a paramedic license. As a paramedic I have gained a much greater understanding of the anatomy and physiology of test taking.

Test taking is all about the central nervous system, which of course includes the brain. However, as I explain in this book, it is clear that the sympathetic and parasympathetic nervous systems have as much to do with passing and failing multiple choice tests as does the brain. Accordingly, I have also applied many of those principals in this book.

NATIONAL BESTSELLER • From the acclaimed Nobel Prize winner—a powerful

examination of our obsession with beauty and conformity that asks questions about race, class, and gender with characteristic subtlety and grace. In Morrison's acclaimed first novel, *Pecola Breedlove*—an 11-year-old Black girl in an America whose love for its blond, blue-eyed children can devastate all others—prays for her eyes to turn blue: so that she will be beautiful, so that people will look at her, so that her world will be different. This is the story of the nightmare at the

heart of her yearning, and the tragedy of its fulfillment. Here, Morrison's writing is "so precise, so faithful to speech and so charged with pain and wonder that the novel becomes poetry" (The New York Times).

The Second Edition of Paul G. Nestor and Russell K. Schutt's successful and unique *Research Methods in Psychology: Investigating Human Behavior* draws from substantive research stories to illustrate how research is presented while systematically unifying the entire research process within a conceptual framework. This accessible text examines engaging research studies and examples, considering research ethics

throughout. "This is a great text that emphasizes the important concepts within research methods. The resources are excellent; they incorporate up-to-date research and technology and introduce the student to empirical articles, and the information is presented in a way that challenges the student to apply the material."
—Maria Pacella, Kent State University "The text is comprehensive. It covers a wide variety of information without being overwhelming. This is a

very good textbook for an introductory course in research methods. I like that its focus is on psychological research specifically.” —Angela M. Heads, Prairie View A&M University
