What Do Elephants

Eat? Why Do Elephants Need The During the dry season, elephants use their tusks to dig for water. This not only allows the elephants to survive in dry environments and when droughts strike, but also provides water for other animals that share harsh habitats. When forest elephants eat, they create gaps in the

vegetation. Why Elephants are Important - Save the Elephants (Wells of Knowledge Science) There are trillions of stars in the universe, but we rely on our sun to provide (or contribute to) most of what we need to survive and thrive: heat, light, plants, animals, wind, and water. Complete with fun, cartoon illustrations, Robert Wells's new book gives kids plenty... Why Do Elephants Need the Sun? by Robert E. Wells Plants and animals also need water to survive and the elephant can hose up

SLURP! up to 50 gallons a day. If the sun dries up a water hole the sun can be a partner in filling it back up. This book will show you just how the sun takes part by evaporating "ocean water, turning into water vapor," and eventually getting it back to that water hole in the form of rain. Why Do Elephants Need the Sun? (Wells of Knowledge Science ... Elephants need plants to eat, and plenty of water. They need other elephants to mate with, and females need a small family group to help raise

their calves. What do elephants need - Answers Elephants are gentle animals unless the need to protect themselves forces them not to be. Unfortunately, the acts of humans have taken a toll on these intelligent and social animals. How Do Elephants Behave? | Sciencing What Do Elephants Do for Fun? Mud Baths. Mud baths are an all-time favorite of elephants. Socializing. Elephants enjoy socializing with one another, as they are highly intelligent... Water Games. Elephants appreciate cooling off in bodies of water and may enjoy a good romp in... Football and Fun ... What Do Elephants Do for Fun? | Animals - mom.me Some African elephants can be found in the desert and mountains. The desert elephant will travel up to 60 miles in one day in search of food and water. Elephants have the ability to go long periods without water and can drink 45 gallons or more per day. Elephants will dig holes in the ground to find water. What Kind of Habitat Do Elephants Live in? | Sciencing Elephants are known to be extremely empathetic. They are known to mourn

and bury their dead and comfort each other if they are in distress. In one of the talks at Hope, they recount that a herd has a hard time surviving once the matriarch is killed by poachers since their grief makes them inconsolable. 23 Reasons We Need To Save Elephants - BuzzFeed One of the reasons why elephants have been able to survive for so long in the wild has to do with their high level of intelligence. While they do have their natural habitat where they want to be, they also have the mentality to know when they have to move on and they have to adjust to new habitats in order to continue to survive. Elephant Habitat » Elephant World All the information you need to now about elephant tusks. Ivory tusks are a blessing and curse for elephants give the elephant a majesty over other animals as well as a unique tool but they have also led to the senseless slaughter of millions of these amazing animals. Elephant Tusks - Elephant Facts and Information Spillover Risks. Shiftas, the term for Somali bandits who were responsible for the deaths of tens of thousands of

elephants and untold numbers of people in Kenya in the 1970s and 1980s, still kill elephants in Kenya's national parks and engage the Kenya Wildlife Service in deadly firefights. Why Elephants Matter - National Geographic Society Newsroom Elephants are also important because they generate money in countries that need it. Hundreds of thousands of tourists go on photographic safaris hoping to see the "Big Five," including elephant, lion, rhino, hippo and leopard. Why we need elephants - No More Poaching Elephants depend on water for cooling, but only when it gets too hot. To do this, she recruited the help of 13 trained African and Asian elephants from three nearby zoos. Dunkin measured water loss from evaporation by passing a stream of air over their skin and measuring the water content of the air before and after.
