"The coverage of 'Electronics - Circuits and Systems' has been carefully matched to the electronics
 units of the 2007 BTEC National Engineering and the latest AS and A Level specifications in
 Electronics from AQA, OCR and WJEC. However, rather than following the structure of a particular
 syllabus, the material is organised with a logical learning progression, making it ideal for a wide
 range of vocational, pre-degree and introductory undergraduate courses in electronics. The text is
 presented in a proven and engaging way. 'Self Test' features, multiple-choice and end of chapter
 revision questions help students check their understanding. Activities are suitable for practicals,
 homework and other assignments. Key facts, formulae and definitions are highlighted to aid
 revision, and theory is backed up by numerous examples throughout the book. New in this edition
 are 'On the Web' features to help familiarise the student with the use of the Web as a source of
 technical information. The third edition includes five new chapters on electrical and magnetic

fields, diodes, oscillators, integrated circuits, and industrial process control systems, and several
 other chapters have been expanded to reflect the increasing importance of digital electronics and
 microcontroller systems. " - back cover.
