Worm is thrilled when it's his turn to take care of the class pet, Nat the Gnat. But everything goes wrong when he leaves the lid of Nat's tank open. Can Worm make sure the class pet returns safe and sound before Mrs. Mulch finds out? This all-new, original I Can Read story captures the fun of the #1 New York Times bestselling *Diary of a Worm* picture book series by Doreen Cronin and Harry Bliss, and will leave beginning readers wiggling for more! This Level 1 I Can Read book is perfect for children learning to sound out words and sentences.

Animal Defenses Turtleback Books

Insects that look like leaves, snakes that play dead, fish that fly, and toads with poisonous skin--these creatures are among many that defend themselves in fascinating ways. *Animal Defenses* presents the wide variety of physical and behavioral adaptations used by animals and insects in their struggle to survive and shows how scientists continue to make new discoveries about the age-old maneuvering between predator and prey.

Animals in Winter Shell Education
National Book Award Finalist: A "brilliant" study of the science and mythology of the wolf by the New York Times–bestselling author of *Arctic Dreams* (The Washington Post). When John Fowles reviewed *Of Wolves and Men*, he called it "A remarkable book,

both biologically absorbing and humanly rich, and one that should be read by every concerned American.” In this National Book Award–shortlisted work, literary master Barry Lopez guides us through the world of the wolf and our often-mistaken perceptions of another species’ place on our shared planet. Throughout the centuries, the wolf has been a figure of fascination and mystery, and a major motif in literature and myth. Inspiring fear and respect, the creature has long exerted a powerful influence on the human imagination. *Of Wolves and Men* takes the reader into the world of the *Canis lupus* and its relationship to humankind through the ages. Lopez draws on science, history, mythology, and his own field research to present a compelling portrait of wolves both real

and imagined, dispelling our fear of them while celebrating their place in our history, legends, and hearts. This ebook features an illustrated biography of Barry Lopez including rare images and never-before-seen documents from the author’s personal collection.

Concepts of Biology Capstone Classroom

The necessity for animal use in biomedical research is a hotly debated topic in classrooms throughout the country. Frequently teachers and students do not have access to a balanced, factual material to foster an informed discussion on the topic. This colorful, 50-page booklet is designed to educate teenagers about the role of animal research in combating disease, past and present; the perspective of

animal use within the whole spectrum of biomedical research; the regulations and oversight that govern animal research; and the continuing efforts to use animals more efficiently and humanely.

The Girl With 500 Middle Names Big Buddy Books

If you could have any animal's front teeth, whose would you choose? **WHAT IF YOU HAD ANIMAL TEETH?** takes children on a fun, informative, and imaginative journey as they explore what it would be like if their own front teeth were replaced by those of a different animal. Featuring a dozen animals (beaver, great white shark, narwhal, elephant, rattlesnake, naked mole rat, hippopotamus, crocodile, and more), this book explores how different teeth are especially adapted for an

animal's survival. At the end of the book, children will discover why their own teeth are just right for them. And they'll also get a friendly reminder to take good care of their teeth, because they're the only teeth they'll ever have. Each spread features a photograph of the animal using its specialized teeth on the left and a humorous illustrated image of a child using that animal's teeth on the right.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is

grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

over fifteen years, *We Animals* illustrates and investigates animals in the human environment: whether they're being used for food, fashion and entertainment, or research, or are being rescued to spend their remaining years in sanctuaries. Award-winning photojournalist and animal advocate Jo-Anne McArthur provides a valuable lesson about our treatment of animals, makes animal industries visible and accountable, and widens our circle of compassion to include all sentient beings.

Should Animal Testing Be Banned?

In the Hands of a Child

The lessons in this module introduce students to the classification system for living things. Students investigate the animal, plant, fungus, protest, and

moneran kingdoms, to observe, identify, compare, and classify various living things. As well, they explore the field of archaeology through a study of fossils. Also included: * Materials lists; * Activity descriptions; * Questioning techniques; * Activity centre and extension ideas; * Assessment suggestions; * Activity sheets and visuals. The module offers a detailed introduction to the Hands-On Science program (guiding principles, implementation guidelines, an overview of the skills that young students use and develop during scientific inquiry), a list of children's books and websites related to the science topics introduced, and a classroom assessment plan with record-keeping templates.

In today's educational climate of one-size-fits-all instruction, Planning for Inquiry shows you how to get an inquiry-based curriculum started, how to keep it going, and how to do so while remaining accountable to mandated curricula, standards, and programs. Diane Parker invites you into her classroom to think along with her as she provides an up-close look at the underlying structure of an inquiry-based approach, what such an approach might look like in practice, and how you can make it happen in your own classroom. Supported by a wealth of stories and examples, Parker shares a practical yet nonprescriptive framework for developing curriculum from learners' questions and authentic classroom events. You will be able to adapt this

framework for both short- and long-term planning with your own students. Planning for Inquiry offers valuable information and much-needed moral support to those of us who believe that

there is more to teaching than following a script, and that teachers, not programs, make a difference in the lives of children.
