A Counselor's Guide to the Dissertation Process SAGE

Around the world every year very many students have to complete dissertations or theses as part of their undergraduate or masters studies in tourism and related subjects. Often this substantial piece of self-directed work is the culmination of their programmes. More than just a means to consolidate their final grades, it is also an exciting chance to research a topic of their choosing and a potential gateway to more advanced study as well as job offers and future career paths. Yet for all these reasons, many students view the dissertation as a tricky challenge. This comprehensive book intends to take the stress and anxiety out of doing a dissertation in tourism studies and related disciplines. The process is examined from the germination of an idea to the submission and assessment of the final document. Written primarily for students conducting independent research for the first time, this book offers simple advice and a clear framework which students can adopt even in more advanced studies at masters and doctoral level. This book debunks popular myths, and aims to overcome common pitfalls. It focuses on the aims and objectives as the DNA of every dissertation. Rather than view it as a single, overwhelming project, the dissertation is presented as a series of more modest, manageable yet crucially inter-linked tasks that all students can successfully complete through careful preparation and effective time management. Dissertations are not to be underestimated and they demand great care and attention, but they can also be immensely rewarding and enriching experiences academically and

personally. This 'jargon free' book is also written with overseas students specifically in mind, drawing directly on our overseas students' experiences. This valuable resource contains start of chapter learning objectives and end of chapter checklists, as well as numerous boxed case studies, to further help assist students through their dissertation.

One of the major challenges facing organization studies has been for a long time to develop an operational content to the notion of routines . This book offers important advances in this direction, both conceptually and through illuminating case studies. Giovanni Dosi, Sant Anna School of Advanced Studies, Pisa, Italy This book showcases advanced empirical research that applies the concept of organizational routines to understanding organizations and how they change and evolve. The contributions gathered in the book cover qualitative, quantitative, and archival methods for empirical research applying the concept of organizational routines. Specific issues highlighted include the use of event-sequence methods in the analysis of organizational routines, the impact of standard operating procedures on recurrent behaviour patterns, and the stability, resilience, and change of organizational routines. The book thus provides an overview of different empirical methods applied to study organizational routines, and of their prerequisites, analytical power, and contribution. This comprehensive book will be of great interest to scholars and postgraduate students in the fields of organization theory, strategy, and organization behaviour. Researchers in organization, management and economic science, organizational change and evolutionary theories will also find this book invaluable.

Since the advent of the internet, online communities have emerged as a way for users to share their common interests and connect with others with ease. As the possibilities of the online world grew and the COVID-19 pandemic raged across the world, many organizations recognized the utility in not only providing further services online, but also in transitioning operations typically fulfilled in-person to an online space. As society approaches a reality in which most community practices have moved to online spaces, it is essential that community leaders remain knowledgeable on the best practices in cultivating engagement. Community Engagement in the Online Space evaluates key issues and practices pertaining to community engagement in remote settings. It analyzes various community engagement efforts within remote education, online groups, and remote work. This book further reviews the best practices for community engagement and considerations for the optimization of these practices for effective virtual delivery to support emergency environmental challenges, such as pandemic conditions. Covering topics such as community belonging, global health virtual practicum, and social media engagement, this premier reference source is an excellent resource for program directors, faculty and administrators of both K-12 and higher education, students of higher education, business leaders and executives, IT professionals, online community moderators, librarians, researchers, and academicians.

Theses and Dissertations Springer Nature

A growing number of both established and newly developed doctoral programs are focusing on the preparation of practitioners rather than career researchers. Professional doctorates such as the Doctor of Nursing Practice (DNP), Doctor of Education (EdD), Doctor of Pharmacy (PharmD), Doctor of Professional Studies (DProf or DPS), and the Doctor of Psychology (PsyD) are, in fact, just a few of the professional doctorates being offered today. Professional doctorates are the fastest growing segment of doctoral education. The nature of the dissertation and the process of completing a dissertation can be quite different in a professional practice doctoral program but there are few resources for both students and faculty involved in completing and mentoring such dissertations. This book was written specifically for students and faculty involved in professional practice dissertation work. It addresses both the tasks and procedures that professional practice dissertations have in common with dissertations in "research" doctoral programs as well as the tasks and issues that are more common in professional practice doctoral programs. For example, negotiating entry into applied settings and securing the cooperation of practicing professionals is covered, as are alternative models for the dissertation (e.g., the "three article dissertation" or "TAD"). The book also covers tasks such as getting IRB approval for applied dissertation research conducted in the field and how to propose and carry out studies based on applied and professional models of research. This book, written by three experienced mentors of professional practice dissertation students, is the comprehensive guide for both students and faculty.

Are you about to embark on a research project for the first time? Unsure which data collection methods are right for your study? Don't know where to

start? By presenting the reader with a series of key research management questions, this book introduces the novice researcher to a range of research designs and data collection methods. Building an understanding of these choices and how they can impact on the dissertation itself will lead to a more robust and rigorous dissertation study. This book is designed to direct your research choices with informative text and key questions, advice from "virtual supervisors" and reflections from students. Lists of suggested further reading also help to support you on your journey to developing an organised and successful dissertation project. Researchers seeking support on their journey to a successful dissertation will find this book a valuable resource.

Student's Guide to Writing Dissertations and Theses in Tourism Studies and Related Disciplines Routledge

"This very readable book is what every graduate student needs as they start their program. I wish my own MA and PhD students, during my 40 years of supervising, could have been demystified by having Casanave's 'textual mentor' as a companion." --Merrill Swain, Professor Emerita, OISE, University of Toronto "Before the Dissertation is an insightful, relevant, and accessible resource for doctoral students at any stage. Full of reflections and advice not found in other books, it serves as an indispensable guide for students and their supervisors. And the dispelling of myths is a superb idea!" --Robert Kohls, PhD candidate, University of Toronto Unlike other books on doctoral dissertation writing, Before the Dissertation is designed for students in the social sciences who are still in the early stages of doctoral study or for master's-level students considering entering doctoral programs. It addresses concerns pertinent to both first and second language users of English. It focuses on purposes for doctoral dissertation writing, topic choice and development, choosing and working with advisers, reading and informal writing, and quality-of-life issues. Faculty advisers who wish to reduce student attrition are also urged to read this book and to work with students at early stages of dissertation projects. Each of the nine chapters begins with a common myth about advanced academic work that is then dispelled. The chapters also pose questions that connect issues directly with individual readers so as to help them make sensible decisions about their doctoral work. The book could be used in graduate classes on issues in doctoral study or dissertation planning, and it can be a companion (textual mentor) to individual students who wish to reflect on their decision to pursue doctoral study/doctoral project. This book may also help instructors and advisers understand the kinds of obstacles faced by students that tend to impede or halt progress.

The Elements of Inquiry covers the basic guidelines for graduate students doing an investigation or inquiry project. It distils the rubrics necessary for teaching research methods and completing research projects, and gives the student researcher a list of steps to follow to complete any type of inquiry project - including formal research projects such as doctoral dissertations. It was written to support the work of students in an educational leadership doctoral program, but it will also assist the research efforts of college students at any level in any discipline. The book begins by establishing the underlying philosophical concepts upon which all good research is based, preparing students to get down to the "nuts and bolts" of conducting their own research and evaluating the research of others. Fundamental concepts and rules of research are explained both for producers and consumers of social science and educational research. Numerous practical examples illustrate the steps in the research process presented in the text. There are end-of-chapter exercises for students to apply the concepts discussed in the chapter. Templates for organizing and presenting research provide students with a game plan for success with their research. The book ends with an up-to-date annotated bibliography of beginning and advanced research texts allowing students easy access to books that detail the more specialized research topics. While most research books detail one or more method in depth, this text provides a broad introduction to many techniques and models used in doctoral dissertations, and will be of particular value to those who are consumers of inquiry studies and research reports. Key to the overview provided is the annotated bibliography that leads the reader to the next stage of understanding or doing research.

It would be easier to quit. Completing a doctoral program is not easy, and trying to complete a dissertation at the end of your program when the last of your energy and motivation is hanging by a string, can seem insurmountable. So, yes, it would be easier to quit. There are even individuals out in the world who proudly use the acronym ABD (all-but-dissertation) as their terminal degree on resumes, business cards and such. But in all honesty, I can tell you what ABD really stands for: quitting. You've invested too much time, energy and money into your doctoral experience to give up. With that being said, this is not an easy journey. Finding resources and support to help you navigate through your doctoral program in the most efficient and painless way is an absolute.

The aim of this book is to help young scientists improve their oral and written communication skills and thus better sell their own results. This book is not a scientific textbook. It addresses the often forgotten question of how to present one's scientific results effectively and convincingly in talks and publications. In addition, this book provides background knowledge on the process of scientific publishing and scientific customs. The recommendations help to develop a good and effective work and communication style that will benefit you throughout your life and bring satisfaction in your work. Furthermore, concrete advice is given on how to write and successfully defend a dissertation and how to take the first steps in career planning.
