The industrial revolution, mechanization, water and steam power, computers, and automation have given an enormous boost to manufacturing productivity. "Faster, Better, Cheaper" in the History of Manufacturing shows how the ability to make products faster, better, and

cheaper has evolved from the stone age to modern times. It explains how different developments over time have raised efficiency and allowed the production of more and better products with less effort and materials, and hence faster, better, and cheaper. In addition, it describes the stories of inventors, entrepreneurs, and industrialists and looks at the intersection between technology, society, machines, materials, management, and - most of all - humans. "Faster, Better, Cheaper" in the History of Manufacturing follows this development throughout the ages. This book covers not only the technical aspects (mechanization, power sources, new materials, interchangeable parts, electricity, automation), but organizational innovations (division of

labor, Fordism, Taylorism, Lean). Most of all, it is a story of the people that invented, manufactured, and marketed the products. The book shows how different developments over time raised efficiency and allowed production of more with less effort and materials, which brought us a large part of the wealth and prosperity we enjoy today. The stories of real inventors and industrialists are told, which includes not only their successes but also their problems and failures. The effect of good or bad management on manufacturing is a recurring theme in many chapters, as is the fight for intellectual property through thrilling tales of espionage. This is a story of successes and failures. It is not only about technology but also about social aspects. Ultimately, it is not a

book about machines but about people! Analysis, Design and Evaluation of Man-Machine Systems 1995 South Asia Books pt. 1. List of patentees.--pt. 2. Index to subjects of inventions.

Annotation New edition of a reference that presents the values of properties typical for the most common alloy processing conditions, thus providing a starting point in the search for a suitable material that will allow, with proper use, all the necessary design limitations to be met (strength, toughness, corrosion

resistance and electronic properties, etc.) The data is arranged alphabetically and contains information on the manufacturer, the properties of the alloy, and in some cases its use. The volume includes 32 tables that present such information as densities, chemical elements and symbols, physical constants, conversion factors, specification requirements, and compositions of various alloys and metals. Also contains a section on manufacturer listings with contact information. Edited by Frick, a professional engineering consultant. Annotation c. The Laboratory of Progress: Switzerland in the 19th Century tells the improbable story of how a small, backward, mountainous agricultural country with almost no raw materials became an industrial powerhouse, a hub of innovation, a touristic mecca and a pioneer in transportation – all in the course of a single century. That a tiny landlocked country should become a dominant steamship builder for the rest of the world; that a country that had never seen a cotton plant should become the world's second-largest textile producer; that a country with hardly any level terrain should come to

boast the world's most highly developed railway network; and that a country whose main export was impoverished emigrants should be transformed into one of the world's major financial centres – these astonishing developments, among many others, are explored and explained, both through the specific stories of individual innovators and through a prescient analysis of the political, economic, societal and cultural structures that formed the context in which Switzerland's astonishing transformation took place. The book is a compelling read both for professional historians and for general readers with an interest in Switzerland; it highlights the roles of transport networks and individual pioneers in industrial and political

development.

Materials Numerical Quantities-Forms Tables Compiled For The Metal Trade Are Dedicated To Vocational Schools As Well As To Practical Usage At The Job Site. Although The Tables Have Been Compiled For Use Primarily By The Apprentice, The Specialized Worker Will Also Find Them Useful. Every Effort Has Been Made To Shorten The Sometimes Tedious Operations And The Arrangement Of Subject Matter Is Such That Its Contents Are Readily Available To The Practical Man. Much Painstaking Effort Must Go In Compiling And Arranging Such Tables. Information Must Be So Selected That The Reader Can, From The Bulk Of Material, Easily Find Out The Subject Of His Interest. Often, A

Decision Of Either Selecting An Item Or Rejecting It Proves Difficult. Too Much Material Packed Into Tabular Compilations Can Be As Harmful As The Omission Of Some Vital Pieces Of Information. Not Only The Selection But Also The Arrangement Of Material Requires Considerable Thought If The Contents Of The Tabular Compilations Have To Be Offered For Ready Reference. Only Then Can The Reader Decide Where To Look For Proper Information. The Principle Of Order Must Be Evident At Once.
