A National Bestseller An “astounding and miraculous ” (Madeline Levine) medical memoir by one of our nation’s leading pediatric surgeons-- the visionary head of Children’s National Anyone who has seen a child recover from a wound or a broken bone knows that kids are made to heal. Their bodies are more resilient, more adaptive, and far more able to withstand acute stress than adults’. In this inspiring memoir, Dr. Kurt Newman draws from his long experience as a pediatric surgeon working at one of our nation’s top children’s hospitals to make the case that children are more than miniature adults. Through the story of his own career and of the brave kids he has treated over the years—and their equally brave and tenacious parents—he reveals the revolution that is taking place in pediatric medicine. When he decided to become a pediatric surgeon, the field was in its infancy, struggling for esteem. Now, nearly forty years later, it is at the forefront of exhilarating new discoveries in everything from cancer research to mental health care. But few parents know how to access the best care for their children. Far too many find themselves frustrated and afraid. Dr. Newman wrote this book to help guide parents—not just of sick kids but of all kids —and to share his knowledge of what children need to thrive. A deeply human story with a spectacular cast of young heroes and heroines, *Healing Children* will convince you that we still have a lot to learn from our kids.

Multidisciplinary approaches to prevention are also discussed in detail. The book's concluding section provides guidelines for preparing professionals for health-related careers.

Following the success of *Designing the World's Best Children's Hospitals: Volumes 1, 2 and 3* and *Maria's Wish: the story of the Maria Fareri Children's Hospital*, the latest children's hospital title from IMAGES documents the development of the leading children's hospital in Chicago, focusing on design, planning, construction and execution. In June 2012, the hospital moved to its current location and changed its name from Children's Memorial Hospital to Ann & Robert H. Lurie Children's Hospital of Chicago. The new name recognises philanthropist Ann Lurie and her late husband, in

honour of the US\$100 million gift she made in 2007 to help create the new hospital and enhance its paediatric research initiatives, which are described in this book.

The Children's Hospital of Philadelphia opened its doors in 1855 amidst a turbulent time in the city. Dr. Francis West Lewis, a prominent Philadelphia physician, was deeply disturbed by the appallingly high mortality rate among infants and children in his city, a result of the poor sanitary conditions in the urban slums that arose in great numbers during the Industrial Revolution. After visiting London for the opening of Great Ormond Street Hospital, Dr. Lewis was inspired to open the first children's hospital in the United States in Philadelphia and advertised in the Public Ledger, "Reception of children suffering from acute diseases and accidents will be received free of charge." The Children's Hospital continued to prosper and lead the advancement of children's health by creating many of the nation's first pediatric training programs and leading in the discovery of vaccines, lifesaving medical equipment, and pioneering treatments. Today, the hospital enjoys international recognition and continues to contribute to the advancement of children's health through a three-part mission of patient care, education, and research.

The Babies Hospital, now known as Morgan Stanley Children's Hospital, was founded in 1887 by Drs. Sarah and Julia McNutt in a brownstone on Fifty-Fifth Street and Lexington Avenue. The hospital is the first freestanding children's hospital in New York City and the fourth oldest in the United States. However, the hospital traces its roots to the establishment of the Vagelos College of Physicians and Surgeons of Columbia University, then King's College, more than 250 years ago. In 1929, the hospital relocated to a new 204-bed facility as part of the Columbia-Presbyterian Medical Center. The New York Times referred to the new Babies Hospital as "the last word in hospital design and equipment." Under the leadership of Rustin McIntosh from 1931 to 1960, the hospital became a beacon for discovery and innovation, assembled a department of noted subspecialists, and was one of the first children's hospitals to develop programs in neonatology, surgery, radiology, neurology, hematology-oncology, and psychiatry. Michael Weiner, MD, Hettinger professor of pediatrics at Columbia University Irving Medical Center, is a vice chair of pediatrics, former director of the Division of Pediatric Oncology, and an author of *Living Cancer: Stories of an Oncologist, Father, Survivor and a Philanthropist*. Stephen E. Novak has been the head of Archives & Special Collections at Columbia's Augustus C. Long Health Sciences Library since 1997. In 2009 Children's Hospital of Philadelphia (CHOP) had been recognized as the best children's hospital in the country for six years in a row; but leadership saw CHOP as more than the large main campus in Western Philadelphia. Beginning in the 1990s, CHOP had created a large network of Primary Care Providers, Specialty Care Centers, Ambulatory Surgery Centers, and community hospital affiliations. CHOP leadership wanted to ensure that the quality they had demonstrated at CHOP would translate out to these facilities, and more, that the combination of many parts could actually work together to provide even better care than the main hospital could do on its own. *Ann & Robert H.
