A study viewed the existing motor vehicle sector, structure, and trading conditions and identified and analyzed the best and most significant continuing vocational training practices in Ireland. In 1991, the motor vehicle sector accounted for 6.2 percent of the Gross National Product.

Employment in the sector has decreased from an estimated 24,000 in 1988 to 17,000 in 1992. The impact of legislation on the Irish motor industry was significant, requiring those engaged in the industry to cope with a wide variety of laws and statutory instruments. The industry has been well served by the statutory scheme for apprentices. Companies involved in four case studies were a component manufacturer, Nissan, Ford, and Volkswagen/Audi. Each case study described the case, the firm, providers of continuing vocational education, training policy of the firm, evaluation of the training concepts, and conclusions in relation to best practice and normal practice. The case studies demonstrated the organization of work at distributor level was very professional. At no time in the history of the motor industry in Ireland did polarization of skills (within trades) occur; all-round skills were found necessary for the survival of the dealership. The relationship between franchise dealers and the distributors was very good. The only regulated training was apprenticeship. Indicated trends were static or slightly increased employment in the motor vehicle sector and training needs that correspond to the overall development of vehicle technology and design. (YLB)

Automotive practical worksheets and assessments for students at Level 2 This Level 2 Student Worksheets book contains tasks that help you develop practical skills and prepare you for assessment. The tasks also reinforce the automotive theory that you will learn online and in the classroom. Each worksheet covers individual topics in a step-by-step manner, detailing how to carry out all of the most important tasks contained within the syllabus. Alongside each of these worksheets is a job card that can be filled in and used as evidence towards your qualification. Endorsed by the Institute of the Motor Industry for all of their Level 2 automotive courses. Step-by-step guides to the practical tasks required at all Level 2 qualifications. Job sheets for students to complete and feedback sheets for assessors to complete.

How can today's workforce keep pace with an increasingly competitive global economy? As new technologies rapidly transform the workplace, employee requirements are changing and workers must adapt to different working conditions. This volume compares new evidence on the returns from worker training in the United States, Germany, France, Britain, Japan, Norway, and the Netherlands. The authors focus on Germany's widespread, formal apprenticeship programs; the U.S. system of learning-by-doing; Japan's low employee turnover and extensive company training; and Britain's

government-led and school-based training schemes. The evidence shows that, overall, training in the workplace is more effective than training in schools. Moreover, even when U.S. firms spend as much on training as other countries do, their employees may still be less skilled than workers in Europe or Japan. Training and the Private Sector points to training programs in Germany, Japan, and other developed countries as models for creating a workforce in the United States that can compete more successfully in today's economy.

Governments in the developing nations of Africa invest much of their countries' scarce resources in social and economic development programs, often without much evaluation of the programs or any knowledge of the potential outcomes. *Social Psychology and Social Change in Nigeria* offers a critical analysis and evaluation of government development social policies and programs, written by a social psychology government consultant who has been involved with such programs for over fifteen years. The analyses and evaluations are conducted using social psychology methods and techniques, including experimental and longitudinal studies, field surveys, and national opinion approaches. Programs and public policies selected for study in the book are those that are guided by social psychology theories and principles, such as the contact hypothesis, ethnic orientation, attitude, behavior and value change, social mobilization, environmental health, and strengthening the youth and women entrepreneurs' contributions to national development. It is the author's hope that this book will be the first of many such studies, thus helping to improve the outcomes of economic development programs in Nigeria and other African nations.
