A text book on Geography
**The Last Fortress of
 Congress Dominance**

Taylor & Francis

This book examines the economic gains and social costs of agrarian transformation in India. The author looks at three phases of agrarian transformation: colonial, post- colonial, and neoliberal. This work combines macro and micro economic data, economic and noneconomic phenomena, and quantitative and qualitative aspects while exploring the context of

historical and contemporary changes with special reference to Maharashtra in western India. It discusses regional disparities in agricultural development, issues of modernisation and social inequality, land owning among scheduled castes and tribes, women in agriculture, pattern of labour migration and farmer's suicides, and documents the experiences and conditions of the rural poor and socially weaker sections to provide a comprehensive

understanding of the significant changes in agrarian rural economy of western India. It also discusses contemporary development policy and practices and their consequences. Lucid and topical, this volume will be useful to scholars and researchers of agrarian studies, rural sociology, social history, agricultural economics, development studies, political economy, political studies, and public policy, as well as planning and policy experts.
Democracy, Development

and Decentralisation in

Risk, Reliability and Sustainable Remediation in the Field of Civil and Environmental Engineering illustrates the concepts of risk, reliability analysis, its estimation, and the decisions leading to sustainable development in the field of civil and environmental engineering. The book provides key ideas on risks in performance failure and structural failures of all processes involved in civil and environmental systems,

evaluates reliability, and discusses the implications of measurable indicators of sustainability in important aspects of multitude of civil engineering projects. It will help practitioners become familiar with tolerances in design parameters, uncertainties in the environment, and applications in civil and environmental systems. Furthermore, the book emphasizes the importance of risks involved in design and planning stages and covers reliability

techniques to discover and remove the potential failures to achieve a sustainable development. Contains relevant theory and practice related to risk, reliability and sustainability in the field of civil and environment engineering Gives firsthand experience of new tools to integrate existing artificial intelligence models with large information obtained from different sources Provides engineering solutions that have a positive impact on sustainability

Reflections on 21st Century Human Habitats in India

Arihant Publications India limited Collection assessment can be defined as the systematic quantitative and qualitative measurement of the degree to which a library's collections meet the library's goals, objectives, and the needs of its users. E-resources are creating new challenges for collection assessment, which require that the collection be measured, analyzed, and judged according to

specific criteria for relevancy, size, quality, and use. The Handbook of Research on Digital Content Management and Development in Modern Libraries is a critical scholarly resource that examines collection management and quality within information services. Featuring a wide range of topics such as e-resources, knowledge management, and consortia, this book is ideal for professionals, academicians, academic librarians, researchers, and students in the fields

of library and information science, education, computer science, and information technology. Moreover, the book will provide insights and support executives concerned with the management of expertise, knowledge, information, and organizational development in different types of work communities and environments. *Budget Memorandum* Cambridge University Press
Routledge Readings on Law and Social Justice:

Dispossessions, Marginalities, Rights presents some of the finest essays on social justice, rights and public policy. With a lucid new Introduction, it covers a vast range of issues and offers a compelling guide to understanding law and socio- legal studies in South Asia. The book covers critical themes such as the jurisprudence of rights, justice, dignity, with a focus on the regimes of patriarchy, labour and dispossession. The fourteen chapters in the volume, divided into

three sections, examine contested sites of the constitution, courts, prisons, land and complex processes of migration, trafficking, digital technology regimes, geographical indications and their entanglements. This multidisciplinary volume foregrounds the politics and plural lives of/ in law by including perspectives from major authors who have contributed to the academic and/ or policy discourse of the subject. This book will be useful to students, scholars,

policymakers and practitioners interested in a nuanced understanding of law, especially those studying law, marginality and violence. It will serve as essential reading for those in law, socio- legal studies, legal history, South Asian studies, human rights, jurisprudence and constitutional studies, gender studies, history, politics, conflict and peace studies, sociology and social anthropology. It will also appeal to legal historians and practitioners of law, and

those in public administration, development studies, environmental studies, migration studies, cultural studies, labour studies and economics.

Climate-Resilient Horticulture: Adaptation and Mitigation Strategies
Springer Science & Business Media

The analysis of urban development of the past twenty years presented in this maiden edition of the World Cities Report shows, with compelling evidence, that there are new forms of

collaboration and cooperation, planning, governance, finance and learning that can sustain positive change. The Report unequivocally demonstrates that the current urbanization model is unsustainable in many respects. It conveys a clear message that the pattern of urbanization needs to change in order to better respond to the challenges of our time, to address issues such as inequality, climate change, informality, insecurity, and the unsustainable forms of

urban expansion.

SOUVENIR of 3rd International Science Congress ISC-2013
Routledge

This book explores the convergence of law and public policy. Drawing on case studies from Asia, Europe, the Middle East and Australia, it examines how judicial and political institutions are closely linked to the socio-economic concerns of the citizens. The essays argue for the utilization of both legislative and executive, private and public spheres of society as vehicles for

transformative social change and to safeguard against violations of socio-economic rights. The volume will be of great interest to both public and private stakeholders, as well as professionals, including NGOs and think tanks, working in the areas of law, government, and public policy. It will also be immensely useful to academics and researchers of constitutionalism, policymaking and policy integration, social justice and minority rights. *Water Management, Food*

Security and Sustainable Agriculture in Developing Economies United Nations Wine is an alcoholic beverage made from fermented grapes or other fruits (Johnson, 1989). All over the world wine is produced and consumed. Wine is the first important product of the grapevine (Shanmugavelue, 1989; Naveen, 2009). Wine is an alcoholic beverage obtained from fermented grape juice that has been carried through in the district of its origin and according to local traditions, practices and

law (Karibasappa, et. al, 2010). Wine is not only made from grapes, but in world the production of wine is made from various fruits and grains, such as apples and berries, are usually named after the fruit from which they are produced combined with the word "Wine" (for example, pomegranate wine, apple wine and elderberry wine) and are generically called fruit wine or country wine. But not all types of fruit are suitable for making all styles of wine (Eisenman, 1998). Besides the grape

varieties traditionally used for winemaking, most fruits naturally lack either a high amount of fermentable sugars, relatively low acidity, yeast nutrients needed to promote or maintain fermentation or a combination of these three characteristics. Wine can be considered as a great tonic to improve health. Also grape juice concentrated is used to make wine in many locations that do not or cannot grow grapes (Morris et.al, 1996).

Risk, Reliability and

Sustainable Remediation in the Field of Civil and Environmental Engineering

Oswaal Books and Learning Private Limited

This open access book provides a clear holistic conceptual framework of CISS-F (competitiveness, inclusiveness, sustainability, scalability and access to finance) to analyse the efficiency of value chains of high value agricultural commodities in India. It is based on the understanding that agriculture is an

integrated system that connects farming with logistics, processing and marketing. Farmer's welfare being central to any agricultural policy makes it very pertinent to study how a value chain works and can be strengthened further to realize this policy goal. This book adds value to the existing research by studying the value chains end-to-end across a wide spectrum of agricultural commodities with the holistic lens of CISS-F. It is not enough that a value chain is competitive but

not inclusive or it is competitive and inclusive but not sustainable. The issue of scalability is very critical to achieve macro gains in terms of greater farmer outreach and sectoral growth. The research undertaken here brings out some very useful insights for policymaking in terms of what needs to be done better to steer the agricultural value chains towards being more competitive, inclusive, sustainable and scalable. The value chain specific research findings help

draw very nuanced policy recommendations as well as present a big picture of the future direction of policy making in agriculture.

Water, Land, and Forest Susceptibility and Sustainability

Springer

The book deals with urban transportation planning in light of environmental sustainability and social equity. It begins with a review of the Indian urban transportation system and the issues surrounding it, and discusses the alternatives and policy directions that are being

considered. It examines all the environmental issues arising out of transportation as a sector and assesses the alternatives that can be considered to improve sustainability. Further, the book not only analyses transportation modes that cater to the travel needs of the poor, so as to make them more socially equitable, but also explores measures to promote them using a multi-criteria and multi-stakeholder approach. It addresses the barriers that are bottlenecks for

the implementation of cleaner fuels and modes of transport and presents an incremental approach to tackle environmental concerns, including climate change, when planning transportation in the long term. Finally, it presents the dilemma of city administrators in choosing between strategies aimed at local pollution control and those aimed at limiting global emissions. This unique book provides a comprehensive overview of “sustainable transportation.” It

discusses all the important elements that are essential to transportation planners and policy makers when planning a city's transportation. Theoretical presentations augmented by case-specific research work and the methodology used in some of the modules, make it a valuable resource for researchers working at the forefront of this area. *Agrarian Transformation in Western India* Springer Nature
Climate change, a global

phenomenon, has attracted scientists to contribute in anticipatory research to mitigate adverse impacts, which are more important for horticulture, considering that the scenario is in the midst of revolution, reaching the production level of 250 million tonnes in India. Impacts of climate variability have, invariably, profound influence on production and quality. An understanding of the impacts and relevant adaptation strategies are of foremost importance to

sustain the productivity and profitability of horticulture crops in the climate change scenario, which necessitates synthesis of current knowledge to develop strategies for adaptation and mitigation to achieve climate-resilient horticulture. The book *Climate-resilient horticulture: adaptation and mitigation strategies* addresses the effects of climate change on different horticultural crops and focuses on the adaptation strategies based on the scientific

knowledge generated by the experts in different agro-climatic regions in India. Issues have been covered in various chapters to make this book a treasure of knowledge in horticulture vis-a-vis climate change. Some of the crops included in the book are apple, grapes, cashew, banana, litchi, mango, coconut, oil palm, potato, tomato, cucurbits and flowers. In addition to strategies to be adapted in these crops, various other important aspects like carbon sequestration,

pests and diseases, and urban landscaping are also covered in the book. Information on climatic risks and adaptation options for resilience in horticultural crops and future strategies and information on pest and disease dynamics on horticultural crops in relation to climate change and available mitigation strategies have also been documented. The book is edited by Dr H P Singh, a visionary leader, and his colleagues, which will be highly valuable to research workers,

students, policy planners and farmers to understand and checkmate the adverse effect of climate change, so as to convert weakness into opportunity.

Agricultural Value Chains in India Taylor & Francis

- This book is an ultimate guide for BBA/ BBS/ BBM entrances
- The entire syllabus of has been divided into 6 main section and further into chapter
- 2 Section Tests is carried after every section
- More than 3000 MCQs have been provided for quick revision of

concept • 5 Previous Years' Solved Question Papers [2019- 2015] for complete practice • 3 Cracked Sets are given for self evaluation • Answer to Section Tests and Crack Sets provided at the end of the book
 BBA/BBM/BMS are 3 years full time Under-Graduated Management programmes that instill the basics of running business operation in a student. Various management Universities/ institutions like AIMA-UGAT, Delhi University, Symbiosis Pune, GGSIPU, Jamia

Millia, etc., conduct entrances exams for the above cited bachelor courses "The Ultimate Guide for the BBA/BMS/BBM Entrance Examination 2021" provides a structured and comprehensive approach towards learning the concepts. The book covers the entire syllabus under 6 sections and also provides ample number of questions in the form of Section tests, MCQs and Solved papers with well-detailed answers to analyze the paper pattern. In order to get

self-evaluated, 3 Crack Sets are provided for additional practice. TABLE OF CONTENT Solved Paper 2020 & 2019 , Numerical Ability, Reasoning and Logical Deduction, Corporate GK (With Question Bank), General Awareness, English Language & Comprehension, Group Discussion & Personal Interview, Crack Sets (1-3), Answer to Section Tests and Crack Sets.

 IGI Global
 The purpose of this Policy Note is to examine the

trends in undernutrition in Maharashtra and to document trends and geographic variability in the major determinants of nutrition and the coverage of key nutrition and health interventions. In doing this analysis, we aim to highlight key areas for actions to improve nutrition in Maharashtra. *Labour in Global Value Chains in Asia* Routledge Artificial neural networks (ANNs) present many benefits in analyzing complex data in a proficient manner. As an effective and efficient

problem-solving method, ANNs are incredibly useful in many different fields. From education to medicine and banking to engineering, artificial neural networks are a growing phenomenon as more realize the plethora of uses and benefits they provide. Due to their complexity, it is vital for researchers to understand ANN capabilities in various fields. The *Research Anthology on Artificial Neural Network Applications* covers critical topics related to artificial neural networks

and their multitude of applications in a number of diverse areas including medicine, finance, operations research, business, social media, security, and more. Covering everything from the applications and uses of artificial neural networks to deep learning and non-linear problems, this book is ideal for computer scientists, IT specialists, data scientists, technologists, business owners, engineers, government agencies, researchers, academicians, and

students, as well as anyone who is interested in learning more about how artificial neural networks can be used across a wide range of fields.

The Statesman's Yearbook 2013 Elsevier

This book highlights various dimensions of human habitats in 21st Century India. The human habitats in the country are marked by perceptible inequality in social and economic spheres. This is occurring in tandem with rapid socio-economic transformation across

both rural and urban landscapes. There is a plurality of transformative characteristics in terms of social and economic classes, gender and space. Inequality in access to natural resources such as land and water is still a big factor in socio-economic differentiation in rural habitats. This constructs a pedestal of unequal opportunities and access to basic human necessities such as healthcare, education, potable water and sanitation. Human

habitats experiencing socio-spatial segregation and exclusion based on caste, community and gender are detrimental in formation of a civil society and its sustainability in long terms. The ideal situation for this would be formation of an inclusive society that celebrates age old socio-cultural diversities, reduces inequalities and reveres composite culture.

Science SAGE Publishing
India

Auto manufacturing holds the promise of employing many young Indians in relatively well-paid, high-skill employment, but this promise is threatened by the industry's role as a site of immense conflict in recent years. This book asks: how do we explain this conflict? What are the implications of conflict for the ambitious economic development agendas of

Indian governments? Based upon extensive field research in India's National Capital Region, this book is the first to focus on labour relations in the Indian auto industry. It proposes the theory that conflict in the auto industry has been driven by twin forces: first, the intersection of global networks of auto manufacturing with regional social structures which have always relied on informal and precariously-employed workers; and, second, the systematic displacement

of securely-employed 'regular workers' by waves of precariously-employed 'de facto informal workers'.
