“How do people make decisions in organizations?” is the question at the core of this book. Do people act rationally? Under what conditions can information and knowledge be shared to improve decision making? Davide Secchi applies concepts and theories from cognitive science, organizational behavior, and social psychology to explore the dynamics of decision making. In particular, he integrates “bounded rationality” (people are only partly rational; they have (a) limited computational capabilities and (b) limited access to information) and “distributed cognition” (knowledge is not confined to an individual, but is distributed across the members of a group) to build upon the pioneering work of Herbert Simon (1916-2001) on rational decision making and contribute fresh insights. This book is divided into two parts. The first part (Chapters 2 to 5) explores how recent studies on biases, prospect theory, heuristics, and emotions provide the so-called “map” of bounded rationality. The second part (Chapter 6 to 8) presents the idea of extendable rationality. In this section, Secchi identifies the limitations of bounded rationality and focuses more heavily on socially-based decision processes and the role of “docility” in teaching, managing, and executing decisions in organizations. The practical implications extend broadly to issues relating to change and innovation, as organizations adapt to evolving market conditions, implementing new systems, and effectively managing limited resources. The final chapter outlines an agenda for future research to help understand the decision making characteristics and capabilities of an organization.

Why do contemporary art curators define their work as ethnography? How can curation illuminate the practice of contemporary anthropology? Does anthropology risk disappearing as a specific discipline within the general model of the curatorial? The Anthropologist as Curator collects together the research of

international scholars working at the intersection of anthropology and contemporary art in order to explore these questions. The essays in the book challenge what it means to do ethnographic work, as well as the very definition of the discipline of anthropology in confrontation with the model of the curatorial. The contributors examine these ideas from a variety of angles, and the book includes perspectives from anthropologists who have set up their own exhibitions; those who have conducted fieldwork on the arts, including participatory practices, digital images and sound; and contributors who are currently working in a curatorial capacity at a museum. With case studies from the USA, Canada, Germany, Brazil, Mexico, India and Japan, the book represents an international perspective and is relevant to students and scholars of anthropology, contemporary art, museum studies, curatorial studies and heritage studies.

“One of the most captivating novels of the year.” – Washington Post NATIONAL BESTSELLER A Best Book of the Year: Bloomberg | Boston Globe | Chicago Public Library | Chicago Tribune | Esquire | Kirkus | New York Public Library | New York Times Book Review (Historical Fiction) | NPR's Fresh Air | O Magazine | Washington Post | Publishers Weekly | Seattle Times | USA Today A Library Reads Pick | An Indie Next Pick From the #1 New York Times bestselling author of Beautiful Ruins comes another “literary miracle” (NPR)—a propulsive, richly entertaining novel about two brothers swept up in the turbulent class warfare of the early twentieth century. An intimate story of brotherhood, love, sacrifice, and betrayal set against the panoramic backdrop of an early twentieth-century America that eerily echoes our own time,

The Cold Millions offers a kaleidoscopic portrait of a nation grappling with the chasm between rich and poor, between harsh realities and simple dreams. The Dolans live by their wits, jumping freight trains and lining up for day work at crooked job agencies. While sixteen-year-old Rye yearns for a steady job and a home, his older brother, Gig, dreams of a better world, fighting alongside other union men for fair pay and decent treatment. Enter Ursula the Great, a vaudeville singer who performs with a live cougar and introduces the brothers to a far more dangerous creature: a mining magnate determined to keep his wealth and his hold on Ursula. Dubious of Gig’s idealism, Rye finds himself drawn to a fearless nineteen-year-old activist and feminist named Elizabeth Gurley Flynn. But a storm is coming, threatening to overwhelm them all, and Rye will be forced to decide where he stands. Is it enough to win the occasional battle, even if you cannot win the war? Featuring an unforgettable cast of cops and tramps, suffragists and socialists, madams and murderers, The Cold Millions is a tour de force from a “writer who has planted himself firmly in the first rank of American authors” (Boston Globe).

*Space-Time Design of the Public City* UNESCO Publishing

Time has become an increasingly important topic in urban studies and urban planning. The spatial-temporal interplay is not only of relevance for the theory of urban development and urban politics, but also for urban planning and governance. The space-time approach focuses on the human being with its various habits and routines in the city. Understanding and taking those habits into account in urban planning and public policies offers a new way to improve the quality of life in our cities. Adapting the supply and accessibility of public spaces and services to the inhabitants' space-time needs calls for an integrated approach to the physical design of urban space and to the organization of cities. In the last two decades the body of practical and theoretical work on urban space-time topics has grown substantially. The book offers a state

of the art overview of the theoretical reasoning, the development of new analytical tools, and practical experience of the space-time design of public cities in major European countries. The contributions were written by academics and practitioners from various fields exploring space-time research and planning.

It is well established that certain strains of yeasts are suitable for transforming grape sugars into alcohol, while other yeast strains are not suitable for grape fermentations. Recent progress has clearly demonstrated that the sensory profile of a wine is characteristic of each vine cultivated, and the quality and technological characteristics of the final product varies considerably due to the strains which have performed and/or dominated the fermentation process. Because of their technological properties, wine yeast strains differ significantly in their fermentation performance and in their contribution to the final bouquet and quality of wine, such as useful enzymatic activities and production of secondary compounds related both to wine organoleptic quality and human health. The wine industry is greatly interested in wine yeast strains with a range of specialized properties, but as the expression of these properties differs with the type and style of wine to be made, the actual trend is in the use of selected strains, which are more appropriate to optimize grape quality. Additionally, wine quality can be influenced by the potential growth and activity of undesirable yeast species, considered spoilage yeasts, which cause sluggish and stuck fermentation and detrimental taste and aroma in the wine.

*Biomass Supply Chains for Bioenergy and Biorefining* highlights the emergence of energy generation through the use of biomass and the ways it is becoming more widely used. The supply chains that produce the feedstocks, harvest, transport, store, and prepare them for combustion or refinement into other forms of fuel are long and complex, often differing from feedstock to feedstock. *Biomass Supply Chains for Bioenergy and Biorefining* considers every aspect of these supply chains, including their design, management, socioeconomic, and environmental impacts.

The first part of the book introduces supply chains, biomass feedstocks, and their analysis, while the second part looks at the harvesting, handling, storage, and transportation of biomass. The third part studies the modeling of supply chains and their management, with the final section discussing, in minute detail, the supply chains involved in the production and usage of individual feedstocks, such as wood and sugar starches, oil crops, industrial biomass wastes, and municipal sewage stocks. Focuses on the complex supply chains of the various potential feedstocks for biomass energy generation Studies a wide range of biomass feedstocks, including woody energy crops, sugar and starch crops, lignocellulosic crops, oil crops, grass crops, algae, and biomass waste Reviews the modeling and optimization, standards, quality control and traceability, socioeconomic, and environmental impacts of supply chains

`This is an important text. It brings together critical reflections on the discipline's contribution in terms of theory, practice and pedagogy and as such is equally as insightful and challenging as some of its recent predecessors (eg Brown et al 1996; Brown and Turley 1997; Brown 1998). The book represents a useful point of departure for those setting off on their own critical journeys and, thus, it should be included on the reading lists of all those carrying out masters or doctoral research in marketing' - *Journal of Marketing Management* This book provides a challenging and stimulating coverage of a broad range of key issues in contemporary marketing - such as marketing philosophy, marketing ethics, the mar

This book investigates the dynamics of the management of sustainability in networks and clusters - an area of increasing importance that is neglected by the many studies addressing sustainability at the single-enterprise level. The focus is in particular on projects involving groups of enterprises with a high level of productive interdependence and steady relations that allow sharing of resources and activities. The book is organized

into two parts, the first of which discusses the value of the territory for firm competitiveness, examines the importance of social capital in creating sustainable business behaviors and “unique” networks, and describes principles and tools for the implementation and management of sustainability strategies in networks or clusters. The second part then presents the methodology and outcomes of empirical research conducted on industrial districts and productive centres in Campania, southern Italy, which are representative of Italian productive chains. The book will be of value to all management scholars with an interest in this field, as well as to readers wishing to learn more of the role of local institutions.

Extreme Brewing is a recipe-driven resource for aspiring home brewers who are interested in recreating these specialty beers at home, but don't have the time to learn the in-depth science and lore behind home-brewing. As such, all recipes are malt-syrup based (the simplest brewing method) with variations for partial-grain brewing. While recipes are included for classic beer styles -- ales and lagers -- Extreme Brewing has a unique emphasis on hybrid styles that use fruit, vegetables, herbs and spices to create unique flavor combinations. Once their brew is complete, readers can turn to section three, The Rewards of Your Labor, to receive guidance on presentation, including corking, bottle selection and labeling as well as detailed information on food pairings, including recipes for beer infused dishes and fun ideas for themed dinners that allow the reader to share their creations with family and friends.
