Quality of life is an important outcome when treating a cancer patient. Research is vast on the role of quality of life on patients' general wellbeing, responsiveness to treatment, and even mortality. On the other hand, there are several methodological considerations when planning to measure and assess quality of life in cancer patients. This handbook - with authorship that is diverse in terms of perspectives, countries, and fields - aims to fill a gap in the available literature and responds to a number of questions in its 26 chapters: What is quality of life and health-related quality of life and why are they important? How is quality of life assessed? What are the theoretical and methodological considerations when using quality of life outcomes in cancer research? How is quality of life useful in routine clinical care? How is quality of life impacting different cancer populations in terms of site of the cancer, age, gender, and context? *Handbook of Quality of Life in Cancer* is a learning and consulting tool that can be used by a diverse audience. It is an essential resource for researchers who wish to use quality of life assessment tools in clinical trials or other types of studies; clinicians who want to develop their understanding of how they can utilize quality of life and how it is important for the patients they care for; and commissioners who wish to see why quality of life may impact population health and health system costs. Students in diverse fields of study (medicine, nursing, psychology, social work, medical sociology, population health, epidemiology, and medical statistics, among others) also would benefit from using the handbook for their studies and for their continuing professional development.

The field of health care technology assessment focuses on the use of medical technologiesâ€"their impacts on safety, efficacy, and effectiveness; cost-effectiveness and cost benefit; quality; and their social, legal, and ethical implications. This wide-ranging monograph addresses some of the gaps in understanding health status and quality of life, such as the use of quality-of-life measures in technology assessment, organ transplantation, and pharmaceutical trials. One chapter provides basic references for the technical attributes of many established measures and some lesser known ones. The final chapter offers recommendations concerning the appropriate applications of these measures and highlights areas for cooperative research.

**Records, Analysis, and Test Procedures** Naval Institute Press  
The present book includes a set of selected extended papers from the fifth International Joint Conference on Computational Intelligence (IJCCI 2013), held in Vilamoura, Algarve, Portugal, from 20 to 22 September 2013. The conference was composed by three co-located conferences: The International Conference on Evolutionary Computation Theory and Applications (ECTA), the International Conference on Fuzzy Computation Theory and Applications (FCTA), and the International Conference on Neural Computation Theory and Applications (NCTA). Recent progresses in scientific developments and applications in these three areas are reported in this book. IJCCI received 111 submissions, from 30 countries, in all continents. After a double blind paper review performed by the Program Committee, only 24 submissions were accepted as full papers and thus selected for oral presentation, leading to a full paper acceptance ratio of 22%. Additional papers were accepted as short papers and posters. A further selection was made after the Conference, based also on the assessment of presentation quality and audience interest, so that this book includes the extended and revised versions of the very best papers of IJCCI 2013. Commitment to high quality standards is a major concern of IJCCI that will be maintained in the next editions, considering not only the stringent paper acceptance ratios but also the quality of the program committee, keynote lectures, participation level and logistics.

While scores of books have been published about the atomic bombings that helped end World War II, little has been written about the personal lives and relationship of the three men that led the raids. Paul Tibbets, Tom Ferebee, and Ted "Dutch" Van Kirk exemplified what Life Magazine meant when in 1942 it called the B-17 pilot, bombardier, and navigator "the three musketeers of the Army Air Forces." A former navigator-bombardier and pilot himself, Harder brings a fresh perspective to an otherwise well-known narrative. He provides a rare insider's look at exactly who

these three fellows were, how they were trained, what they meant to each other, and finally how everything coalesced into the Hiroshima and Nagasaki attacks.

The Hispanic-Latino community is large, expanding, and an important contributor to the U.S. economy. Numbering over 50 million, Hispanic-Latinos currently represent about 16% of the population. Hispanic-Latinos engage in a diversity of jobs that help keep the American economic engine running. The practice of entrepreneurship has been on the rise with over 2.3 million businesses in the United States categorized as Hispanic owned, generating over \$345 billion in sales. This book examines the entrepreneurial mindset of Hispanic-Latinos in the United States. With limited literature on the subject, the authors created a pioneering book that captures the viewpoints of real-life Hispanic-Latino entrepreneurs. Using a 15-item questionnaire, the authors obtained information on entrepreneurial intent, goals, and business strategies utilized. This book highlights real world business experiences, including challenges relating to entrepreneurial pursuits, and the importance of hardwork, discipline, and a positive mindset in the success of an enterprise.

It was over five years ago that the Centre for Medicines Research organized a workshop entitled "Quality of Life: Assessment and Application". This workshop brought together a unique group of participants, some of whom had been involved in studies on quality of life for well over a decade, whilst others were meeting the subject for the first time. This blend of experienced researchers and enthusiastic newcomers was a great stimulus to the discussions which followed individual presentations as well as that resulting from the study groups. In the ensuing publication, a balance was sought between a consideration of the complex principles underlying the assessment of quality of life and the application of such assessments to specific clinical conditions which necessitated this approach. The organization in 1991 of a second workshop entitled "Quality of Life Assessment: Key Issues in the 1990s" resulted in a further consideration of the quality of life philosophy, concepts and key instruments together with an update on assessing quality of life in a number of major disease areas. Of particular importance was an examination of various viewpoints concerned with ethical questions and their implications, and quality of life from industry, regulatory and health care purchasers' perspectives. As a result of this second workshop, the editors of the original book referred to above decided to produce a second edition with a number of updates and additional chapters.

Every week the TV news highlights the routine use of drones and guided missiles against terrorist enemies and the recreational use of drones has become commonplace. The Nazi WWII development of guided missiles and bombs is often given credit for America's

Cold War success in this realm. However, it was during that war that America, and the Air Force, in particular, also began the development of systems and weapons that laid the foundation for today's technology. 'Off Target' relates in detail the then "Secret" research, development, and combat employment of these early guided bombs, missiles, and drones from 1917 to 1948. Using formerly Secret/Confidential manuals, reports, microfilm print outs, and photos, collected over 40 years, author Wolf, gives the air war historian and enthusiast a detailed look at this unknown topic that progressed from biplane drones to sophisticated post-WWII guided missiles. Among the subjects discussed are Sperry's aerial torpedo and the Kettering "Bug" of WWI to WWII's early rudimentary GB Series Glide Bombs to the more sophisticated VB Series that evolved from radio, heat, light, or television guidance. The Aphrodite/Joseph Kennedy B-17, BQ, TDR, and target drones are discussed as are the SWOD, GLOMB, GORGON, and JB Jet bomb series.

In the past businesses have viewed water as a minimal operational cost and not a strategic issue. However, water has now emerged as a critical issue for both corporations and the public sector in response to increased water demand, climatic risks and potentially negative impacts on brand value. This innovative book provides up to date information on global water issues and describes how companies can not only address these challenges but also implement high value global water strategies. It shows: Why water is a critical business issue for companies which now face water risk to their operations and brands; How new concepts such as embedded water and virtual water are forcing companies to think differently about how they use water to manufacture products; That companies need to develop a corporate water strategy to manage it as a key business issue and capture the real value of water; How companies can develop partnerships with non-governmental organizations to implement water strategies
