Whitaker's Books in Print MDPI

An element of obvious importance, mercury is also hazardous in the environment and corrosive to many materials. A knowledge of its solubility is inestimable in addressing problems concerning the element's concentration in our surroundings. This volume presents all relevant data published on the solubility of mercury up to June 1986. By combining these data with the mercury equilibrium vapour pressure, Henry's constant and Ostwald coefficients can be calculated.

Outboard Motors Maintenance and Repair Manual Haynes Manuals N. America, Incorporated

Mercury is a global pollutant that affects the health of both humans and ecosystems. This Special Issue collects three review papers and six research articles that report on the latest findings on the mechanisms of mercury toxicology and its impacts on environmental health. This collection of papers provides useful, new information on the mechanisms of mercury toxicity and methods of improving the risk assessment of mercury exposure.

MerCruiser Stern Drive Shop Manual 1998-2013 Sheridan House, Inc.

The aim of this book, with its superb step by step photographs and detailed diagrams is to enable every owner to understand the workings of an outboard motor (2 or 4 stroke) and be able to fix it with relative ease. It includes: an explanation of the different parts that make up the engine and how they interact; how fuel is transformed into propulsion; regular maintenance and repair worksheets to help even the most mechanically ignorant to work on their outboard engine with confidence; the most common causes of breakdown; troubleshooting tables to allow you to diagnose and fix the most common engine problems and advice on how to winterize your outboard in one short afternoon. After reading this book, your outboard will no longer be a potential bother to you but an ally for better boating.

Mercury Deposits of Southwestern Alaska DIANE Publishing

Observations from the first spacecraft to orbit the planet Mercury have transformed our understanding of the origin and evolution of rocky planets. This volume is the definitive resource about Mercury for planetary scientists, from students to senior researchers. Topics treated in depth include Mercury's chemical composition; the structure of its crust, lithosphere, mantle, and core; Mercury's modern and ancient magnetic field; Mercury's geology, including the planet's major geological units and their surface chemistry and mineralogy, its spectral reflectance characteristics, its craters and cratering history, its tectonic features and deformational history, its volcanic features and magmatic history, its distinctive hollows, and the frozen ices in its polar deposits; Mercury's

exosphere and magnetosphere and the processes that govern their dynamics and their interaction with the solar wind and interplanetary magnetic field; the formation and large-scale evolution of the planet; and current plans and needed capabilities to explore Mercury further in the future.

Registry of Toxic Effects of Chemical Substances DIANE Publishing

This essential handbook and ready reference offers a detailed overview of the existing and currently researched technologies available for the control of mercury in coal-derived gas streams and that are viable for meeting the strict standards set by environmental protection agencies. Written by an internationally acclaimed author team from government agencies, academia and industry, it details US, EU, Asia-Pacific and other international perspectives, regulations and guidelines.

This report is the outcome of a workshop arranged to support the development of the EU strategy on mercury (based on the Council decision in December 2002), and to support international conventions aimed at reducing emissions, environmental contamination and human exposure to mercury. Specific objectives of the workshop were, a) To summarise the state-of-the-art on sources, emissions-distribution-deposition-exposure, options and technologies to reduce uses and releases, the waste problem and waste management options, and health/environmental impacts of mercury. b) To identify and discuss priority problem areas. c) To derive recommendations for an effective European mercury abatement strategy especially: - How to deal with the surplus mercury from the chloralkali industry? - How to deal with mercury in products and waste? - How to deal with mercury from coal-fired power plants and other atmospheric point sources? d) To review national, regional and international programs e.g. the UNEP mercury programme and the revision of the CLRTAP Protocol on Heavy Metals. The report consists of an executive summary, reports from group discussions and background papers prepared by participants. About 100 participants representing

research, policy, industry and NGOs were present at the workshop.

The Mercury Minerals from Terlingua, Texas Univ of California Press

Interest in the title compounds has fallen into three phases: initial study of their solution chemistry, study of their role in the electrode reactions of alkaline batteries during and since World War II, and present concern over the mechanisms by which these elements can enter the environment through dissolution processes, sometimes with toxic results. This volume provides a complete compilation of solubility data published up to 1984, including all pertinent articles, together with critical evaluations of the data. Almost all the measurements relate to aqueous systems.

Mercury-arc Rectifiers and Mercury-vapour Lamps Elsevier

Mercury pollution and contamination are widespread, well documented, and continue to pose a public health concern in both developed and developing countries. In response to a growing need for understanding the cycling of this ubiquitous pollutant, the science of mercury has grown rapidly to include the fields of biogeochemistry, economics, sociology, public health, decision sciences, physics, global change, and mathematics. Only recently have scientists begun to establish a holistic approach to studying mercury pollution that integrates chemistry, biology, and human health sciences. *Mercury in the Environment* follows the process of mercury cycling through the atmosphere, through terrestrial and aquatic food webs, and through human populations to develop a comprehensive perspective on this important environmental problem. This timely reference also

provides recommendations on mercury remediation, risk communication, education, and monitoring.

Biogeochemical Cycle of Mercury in Reservoir Systems in Wujiang River Basin, Southwest China

DIANE Publishing

This book presents an intensive study on the biogeochemical cycle of mercury in a river-reservoir system in Wujiang River Basin, the upper branch of the Yangtze River. Six reservoirs located in the mainstream of the Wujiang River and their corresponding inflow/outflow rivers were selected for inclusion in this study, which was conducted by researchers from the Institute of Geochemistry, Chinese Academy of Sciences. The concentration and distribution of Hg in reservoirs (the water column, sediment, sediment pore water), inflow/outflow rivers of reservoirs, and wet deposition in Wujiang River Basin were systematically investigated, and measurements were taken of the water/air exchange flux of gaseous elemental mercury (GEM). On the basis of the data gathered, a detailed mass balance of total mercury (THg) and methylmercury (MeHg) in the six reservoirs was developed. In addition, the book identifies the primary factors controlling Hg methylation in the river-reservoir system in Wujiang River Basin. The accumulation and bio-magnification of Hg species within food chains in reservoirs and human health risk of MeHg exposure through fish consumption are also included in this book.
