Manufacturing

Including Lessons

Learned from Delphi

Packard Electric and

General Motors outlines concrete suggestions that can help to stop the outflow of manufacturing jobs and prosperity from our shores. The book explains why most companies have not reaped the benefits promised from the implementation of the multitude of methodologies that have inundated manufacturers and outlines the steps companies can take to reverse this trend. The author's 30-year background in engineering and manufacturing, in both national and international assignments, puts him in a unique position to supply insights on foreign competition that few are able to provide. In addition to

discussing the tools and concepts with a proven history of success, the book also elaborates on what doesn't work. It presents an insider's perspective of what went horribly wrong within Delphi and GM so other manufacturing companies can avoid making the same mistakes. The book describes how to effectively set up a manufacturing system and accurately measure and control direct labor. It shares easy-to-implement tools that the author developed and implemented with proven track records for improving performance. Such tools include computer programs that can provide a competitive advantage, a proven way to reduce total

process cycle time, and a scientific way to establish proper lot sizes. Instead of presenting a lot of theory, the author provides ideas based on common sense and practical experience. The concepts and tools outlined in the text are simple and straightforward, yet powerful enough to help any conscientious company improve its competitive position.

This report describes a HITEC evaluation designed to determine the basic capability and limitations of the Landmark/Mirafi System for use as a technically viable precast MSE retaining wall system. The evaluation was conducted based on the material, design,

construction, performance, and quality assurance information outlined in the HITEC Protocol.

Information Circular

DIANE Publishing Coal Industry Annual 1997 provides comprehensive information about US coal production, number of mines, prices, productivity, employment, productive capacity, and recoverable reserves. US Coal production for 1997 and previous years is based on the annual survey EIA-7A, Coal Production Report. This report presents data on coal consumption, coal distribution, coal stocks, coal prices, and coal quality for Congress, Federal and State agencies, the coal industry, and the general public.

Appendix A contains a compilation of coal statistics for the major coal-producing States. This report includes a national total coal consumption for nonutility power producers that are not in the manufacturing, agriculture, mining, construction, or commercial sectors. 14 figs., 145 tabs.

Feasibility Study of Mining Coal in an Oxygen Free Atmosphere CRC

Press

This book is for anyone interested in producing bakery products of consistent quality and low operating costs.

This book is also intended to be used as a professional reference. There are many good books available about the art and science of baking. However, these other

books do not help an owner or a bakery manager grow their businesses. In the baking industry, all successful businesses begin with quality products. These businesses almost always start in a kitchen, and then the company has to figure out how to keep up with the growing demand for these bakery products. Fortunately, if the company makes prudent decisions, it is possible to drive down operating costs. On the other hand, if the company cannot produce consistent quality; or if the operating costs are out of control, the company will soon be out of the baking business. This handbook should help more and more

aspiring bakers sustain their success.

In this book, the authors examine interactive computer graphics and its use in design industrial robots, computer control of manufacturing processes, computer-integrated production control, automated inspections, and flexible manufacturing systems. They also discuss the implementation of turnkey CAD/CAM

systems.
